"Complex of NS3 protease and NS4A peptide of BK strain hepatitis C
virus: a 2.2-A resolution structure in a hexagonal crystal form.";
Protein Sci. 7:837-847(1998).

- 1- FUNCTION: THE SMALL PROTEINS NS2B, NS4A AND NS4B ARE
HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.
NS3 AND NS5 MAY PLAX A ROLE IN THE VIRAL RNA REPLICATION.
C -1- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral costition, Cys or Thr in Pl and Ser or Ala in Pl'.
C -1- CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +
                                                                                                                                                                                                                                                                                                                                                                                                     {RNA}(N).
-!- SUBUNT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A
LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF
PROTEIN C AND MRNA.

Genome polyprotein (Contains: Capsid protein C (Core protein) (P22);
Envelope glycoprotein EI (GP32) (GP35); Envelope glycoprotein E2
(GP68) (GP70) (NS1); Protein P7: Nonstructural protein NS2 (P21)
(EC 3.4.22..); Protease/helicase NS3 (P70) (Hepacivirin)
(EC 3.4.21.98); Nonstructural protein NS48 (P4); Nonstructural protein NS58 (P65) (P77); Nonstructural protein NS58 (P65) (P77); Nonstructural protein NS58 (P66) (P70) (RNA-directed RNA polymerase) (EC 2.7.7.48)].
Hepatitis C virus (isolate HC-36) (HCV).

    -1- SIMILARITY: THE PROTEASE BELONGS TO PEPTIDASE FAMILY S29.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ro; IPR007095; RNA_pol_DS_PS.

Envelope glycoprotein [Contains: Capsid protein C (Core protein) (P22);

Envelope glycoprotein E2

Envelope glycoprotein E2

Envelope glycoprotein E2

EC 3.4.22.-); Protease/helicase NS3 (P70) (Hepacivirin)

EC 3.4.22.-); Protease/helicase NS3 (P70) (Hepacivirin)

EC 3.4.22.-); Nonstructural protein NS5A (P56); Nonstructural protein

ENS5B (P65) (P70) (RNA directed RNA polymerase) (EC 2.7.7.48);

Hepatitis C virus (isolate HC-J8) (HCV).

O Viruses; SRNA positive-strand viruses, no DNA stage; Flaviviridae;
TOTAL SECTION 1. Transferase; RNA-directed RNA polymerase; SMART; SMO0487; DEXDC. 1.

W Polyprotein; Glycoprotein Transferase; RNA-directed RNA polymerase; Core protein; Goat protein; Envelope protein; Helicase; AFP-binding; Transmembrane; Nonstructural protein; Hydrolase; Serine protease.

                                                                                                                                                                                                                                                                                                     SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS: PROTEIN AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.

SIMILARITY: THE PROTEASE BELONGS TO PEPTIDASE FAMILY $29.

THE REPORT OF TH
```

```
single Japanese carrier in Nagasaki prefecture and genome analysis of El and E2/NS1 envelope glycoprotein regions.";
Jpn. J. Trop. Med. Hyg. 22:169-177(1994).
--- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROTEIN ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA (BY SIMILARITY).

-I-SUBMINIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY
LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF
PROTEIN C AND MRNA (BY SIMILARITY).

"Genetic variability of hepatitis C virus in Western Siberia.";
Submitted (APR-2002) to the EMBL/Genbank/DDBJ databases.
-!-SIBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED ILIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX (PROTEIN C AND MRNA (BY SIMILARITY).

"Genetic variability of hepatitis C virus in Western Siberia.";
Submitted (APR-2002) to the EMBL/GenBank/DDBJ databases.
-1-SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLECCAPSID COVERED BY A
LIPOPROTEIN EVIRION OF THIS VIRUS IS A NUCLECCAPSID COVERED BY A
LIPOPROTEIN MAND GLYCOPROTEIN E. THE NUCLECCAPSID IS A COMPLEX OF
PROTEIN AND GRAM BY SIMILARITY).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

APPLICANT: DALBON, PASCAL

APPLICANT: JOLIVET, Michel

TITLE OF INVENTION: SYNTHETIC POLYPEPTIDES BELONGING TO THE

TITLE OF INVENTION: HEPATITIS C VIRUS (HCV) AND WHICH CAN BE USED ESPECIALLY

TITLE OF INVENTION: FOR DETECTING THE LATTER

NUMBER OF SEQUENCES: 12

CORRESPONDENCE ADDRESS:

ADDRESSEE: OLIFF & BERRIDGE

genome polyprotein - hepatitis C virus (genotype 1, N7) (fragment)
N.Contains: core protein
C.Species: hepatitis C virus
A.Variety: genotype 1, N7
A.Variety: genotype 1, N7
C.Date: 19-May-1994 #sequence_revision 26-Jul-1996 #text_change 17-Nov-2000
C.Accession: 54134
R.van Doorn, L.J.; Kleter, G.E.M.; Brower, J.T.
submitted to the EMBL Data Library, January 1994
A.Reference number: S4134
A.Reference number: S4134

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 4
$19975
genome polyprotein - hepatitis C virus (isolate JK3) (fragment)
N;Contains: core protein; envelope protein 1; nonstructural protein 2; NSI/E2 protein
C;Species: hepatitis C virus
A;Variety: isolate JK3
C;Date: 30-Jun-1992 #sequence_revision 30-Jun-1992 #text_change 17-Nov-2000
C;Accession: S19875
C;Accession: S19875
R;Honda, M.; Kaneko, S.; Masashi, U.; Kobayashi, K.; Murakami, S.
Scription: Sequence analysis of putative structural regions of Hepatitis C Virus isolatence number: S18029
A;Accession: S19875
A;Accession: S19875
A;Molecule type: genomic RNA
A;Residues: 1-782 <HON>
A;Accession: S19875
A;Molecule type: genomic RNA
A;Residues: 1-782 <HON>
A;Cross-references: EMBL:X61592; NID:959482; PIDN:CAA43789.1; PID:959483
A;Residues: core protein; envelope protein; envelope protein; onstructural
C;Superfamily: hepatitis C virus genome polyprotein
F;191/Product: core protein #status predicted <MAT2>
F;134-733/Product: envelope protein #status predicted <MAT3>
F;34-733/Product: nonstructural protein 2 (fragment) #status predicted <MAT4>
                                                                                                                                                                                                                                                                                                                                                                    RESULT 3

genome polyprotein - hepatitis C virus (genotype 1, N6) (fragment)
N; Contains: core protein
C; Species: hepatitis C virus
C; Species: hepatitis C virus
A; Variety: genotype 1, N6
C; Date: 19-May-1994 #sequence_revision 26-Jul-1996 #text_change 17-Nov-2000
C; Accession: 541348
R; Van Doorn, L.J.; Kleter, G.E.M.; Brouwer, J.T.
submitted to the EMBL Data Library, January 1994
A; Description: Analysis of hepatitis C virus genotypes 1 to 5 by LiPA.
A; Reference number: 541341
A; Accession: 841348
A; Molecule type: genomic RNA
A; Residues: 1-108 < VANN
A; Residues: 1-108 < VANN
A; Cross-references: EMBL: Z29451
A; Cross-references: EMBL: Z29451
A; Experimental source: genotype 1, N6
C; Superfamily: hepatitis C virus genome polyprotein
C; Keywords: capsid protein; core protein; polyprotein
F; 1-108/product: core protein #status predicted < NATT>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Genome polyprotein - hepatitis C virus (genotype 1, NI) (fragment)

Genomic characterization and mutation rate of hepatitis C virus
isolated from a patient who contracted hepatitis during an epidemic
of non-A, non-B hepatitis in Japan.";
J. Gen. Virol. 73:2725-2729(1992).
-1- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A
LIPOPMOTEIN BYMELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF
PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pfam; PF01539; nc.________Pfam; PF01560; HCV_NS1; 1.

-!- FUNCTION: THE SMALL PROTEINS NSZA, NSZB, NS4A AND NS4B ARE HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.

NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

-!- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDLINE-92230232; PubMed-1314459; Okamamoto K., Lizuka H., Okamoto H., Kurai K., Okada S.I., Yamamoto K., Lizuka H., Tanaka T., Fukuda S., Tsuda F., Mishiro S.; "Full-length sequence of a hepatitis C virus genome having poor homology to reported isolates: comparative study of four distinct genotypes.";
